

KANE 457 | Flue Gas Analyser

The Kane 457 is a powerful, user-friendly flue gas analysis tool and ambient air quality metre designed for professional gas installers. The Kane 457 is intended to measure all of the parameters required to install, commission, and maintain combustion equipment. It can test for flue temperature, oxygen, carbon monoxide, efficiency, CO/CO2 ratio, excess air, and let-by and tightness pressure. The 457 can also be used to measure CO (carbon monoxide) content in ambient air using the built-in air quality metre, complete with timed logging.
