

Radiator or Pipe Thermometer - Magnetic

This 60mm stainless steel surface dial thermometer incorporates a magnetic sensing pad for mounting on ferrous metals and indicates temperature ranges of 0 to 120°C or 32 to 250°F. This magnetic dial thermometer is commonly used in the central heating and HVAC industries to monitor the temperature of radiators and pipes; it is especially useful when balancing radiator temperatures. The clear, graduated scale on the 50 mm dial face indicates temperature in 2 °C and 4 °F divisions.

Specifications	Details
Range	0 to 120Â°C or 32 to 250Â°F
Display	analogue dial
Resolution	2 Â°C and 4 Â°F divisions
