

Kennedy 100x10mm DIA. AL/OX FINE SHARPENING STONE

Oilstones A comprehensive range of bench stones and sharpening stones to cover a wide variety of sharpening and honing applications. Most of the shapes and sizes are available in fine, medium and coarse grades. Available in aluminium oxide or silicon carbide, all stones can be used wet or dry to produce sharp cutting edges or to remove burrs. Aluminium Oxide: Man-made abrasive which is extremely tough enabling high speed penetration of high tensile materials without causing excessive fracturing. This resistance to fracturing makes it a versatile material suitable for general sharpening and honing applications. Silicon Carbide: Man-made abrasive with very hard, sharp particles. This makes it ideal for non-ferrous metals, hard surfaces, alloys and cemented carbides. Also used on stone, marble, glass and plastics. A superior abrasive that is able to penetrate and cut quickly with only light pressure being applied. Round Aluminium Oxide

Specifications	Details
SKU	KEN2552200GTSK
Abrasive Material	Aluminium Oxide
Weight	20 g
Product Type	Abrasive File
Grade	Fine
Grit	A600
Shape	Round
Depth	10 mm
Length	100 mm
Width	10 mm
Brand	Kennedy
