

Elitech GSP-8 | Wall Mounted | Temperature And Humidity Digital Data Logger

The primary purpose of this data logger is to document the temperature and humidity of food, medicines, chemicals, and other items throughout storage and transit. It is broadly applicable to all cold chain storage and logistics links, including cold storage, laboratories, refrigerator trucks, cooler bags, cabinets for cooking and medicine, and refrigerated containers.

This data logger complies with the latest edition of the GSP standard. It features an exterior temperature sensor, an external humidity sensor, a button, and a single large LCD screen. The data logger has two modes for saving data: full record stop and cyclic record. It also features an over limit sound-light alarm. In the event that the temperature and humidity limits are exceeded, it can also automatically shorten the record and interval.

Specifications	Details
Temperature Range	Internal: -40°C ~ 140°C (-20°F ~ +60°F) External: -40°C ~ 176°C (-40°F ~ 80°F)
Humidity	0~100% RH
Resolution	0.1°C / 0.1% RH
Memory Capacity	100,000 points
Logging Rate	10s ~ 24 Hours
